

IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) An apparatus, comprising:

a unitary capacitor having a bottom surface, a top surface, and an aperture in a central portion thereof extending from the top surface to the bottom surface;
and, wherein the bottom surface is provided with electrical power
connections adapted to be connected to a substrate; and
a semiconductor die having an active side adapted to face and be connected to the
substrate, the active side having power connections arranged to distribute
power to and from the semiconductor die, wherein the semiconductor die is
arranged to fit within the aperture when the semiconductor die and the
unitary capacitor are connected to the substrate
~~wherein the unitary capacitor is configured such that when the unitary capacitor is~~
~~disposed on a top surface of a package substrate, a surface area of an~~
~~uncovered peripheral portion of the top surface of the package substrate is~~
~~no greater than 21% of a total surface area of the top surface of the package~~
~~substrate, the uncovered peripheral portion defined as a surface area of the~~
~~top surface of the package substrate between an outside perimeter of the~~
~~unitary capacitor and a perimeter of the package substrate.~~
2. (Previously Presented) The apparatus of Claim 1, wherein the aperture is rectangular.

3. (Previously Presented) The apparatus of Claim 1, wherein the unitary capacitor comprises a layer of an electrically conductive material and a layer of a dielectric material.
4. (Previously Presented) The apparatus of Claim 3, wherein a housing of the unitary capacitor is made from a plastic material.
5. (Currently Amended) The apparatus of Claim 1, wherein said electrical power connections provided on the bottom surface of the unitary capacitor comprise a ball grid array.
6. (Previously Presented) The apparatus of Claim 1, wherein the unitary capacitor comprises co-fired ceramic.
7. (Canceled)
8. (Currently Amended) A semiconductor package assembly, comprising:
 - a semiconductor die mounted on having an active side facing a portion of a top surface of a package substrate, wherein power connections between the active side and the package substrate distribute power to and from the semiconductor die; and
 - a unitary windowframe capacitor having an aperture formed therein, and mounted on the top surface of the package substrate surrounding the semiconductor

die,

~~wherein a surface area of an uncovered peripheral portion of the top surface of the package substrate is no greater than 21% of a total surface area of the top surface of the package substrate, the uncovered peripheral portion defined as a surface area of the top surface of the package substrate between an outside perimeter of the unitary windowframe capacitor and a perimeter of the package substrate.~~

9. (Original) The semiconductor package assembly of Claim 8, further comprising an electronic component mounted on a top surface of the windowframe capacitor.
10. (Original) The semiconductor package assembly of Claim 8, further comprising a second windowframe capacitor mounted on a top surface of the first windowframe capacitor.
11. (Original) The semiconductor package assembly of Claim 8, wherein the aperture is rectangular.
12. (Original) The semiconductor package assembly of Claim 8, wherein the windowframe capacitor comprises a housing.
13. (Original) The semiconductor package assembly of Claim 12, wherein the windowframe capacitor comprises a capacitive material disposed within the

- housing.
14. (Original) The semiconductor package assembly of Claim 13, wherein the capacitive material comprises a layer of an electrically conductive material and a layer of a dielectric material.
15. (Original) The semiconductor package assembly of Claim 14, wherein the housing is made of a plastic material.
16. (Original) The semiconductor package assembly of Claim 13, wherein the capacitive material and the housing comprise a co-fired ceramic.
17. (Original) The semiconductor package assembly of Claim 8, wherein the windowframe capacitor is mounted on the package substrate via a ball grid array.
18. (Canceled)
